# WEDDING STATIONERY

---

Just as every engaged couple knows, their love is one of a kind. Therefore the story reflected in their wedding stationery should be theirs, and theirs alone. It should mirror their personality, loves and passions, and the style of their upcoming event.

Our aim is to generate excitement for your unforgettable day from the first time your guests are told about the event. The process of creating your truly unique wedding stationery begins with a consultation. This is where we get crafty, discuss your inspirations and the best medium to bring your ideas to life.

Working alongside Georgeous, Lauren can produce a range of stationery as well as some extra special touches for your event.

After the initial consultation, two design concepts will be produced for you. As well as the designs, a lot of consideration is taken in choosing appropriate paper and printing methods to ensure a beautiful outcome within your budget. We can show you examples of different printing processes.

After selecting your preferred concept, the first draft of your refined design will be presented to you for feedback. There are two further rounds of amendments included in the design process. Minor tweaks may be accommodated at our discretion.

If you live overseas and are working with Georgeous to create your special day, this is no problem at all, as we can go through the exact same process via email, skype or phone.
